## PROBLEM:

Despite the explosive growth in the token rate of these games (Over 200,000%), 9/10 (90%) of users of projects with the “Play2Earn”, “Move2Earn” and any “2Earn” model enter the project “to earn money”, and only 10 % with the goal of having a good time. When a project ceases to generate significant income for users, “simple” games become uninteresting, the token rate suffers an irreversible collapse along with the project, and we can see such a peak on almost any chart of crypto games (Pic. 1).

## OUR GOAL:

To create a high-quality game and economy and ensure a long life of the project through the “Play&Earn” model, where the indicator of the audience that enters the game with the goal of having a good time will be at least 50%, which will minimize the Ponzi economy and balance the token rate.

in a unique metaverse

Hreidmar's shop

# UNIQUE NFT MARKETPLACE

Meet the dwarf Hreydmar, the owner of the shop where trading operations between players take place. The store is already launched, the marketplace is under development. Hreydmar is the main taxpayer of the kingdom. Both the marketplace and the store play an important role in shaping the market economy.

# BASIC PRINCIPLES OF CONSTRUCTION

## Real market economy

Taxation and budgeting system, like in a real state.

## Deflationary token

Model with 1 token, issued in limited quantities.

## Main income from NFT mining

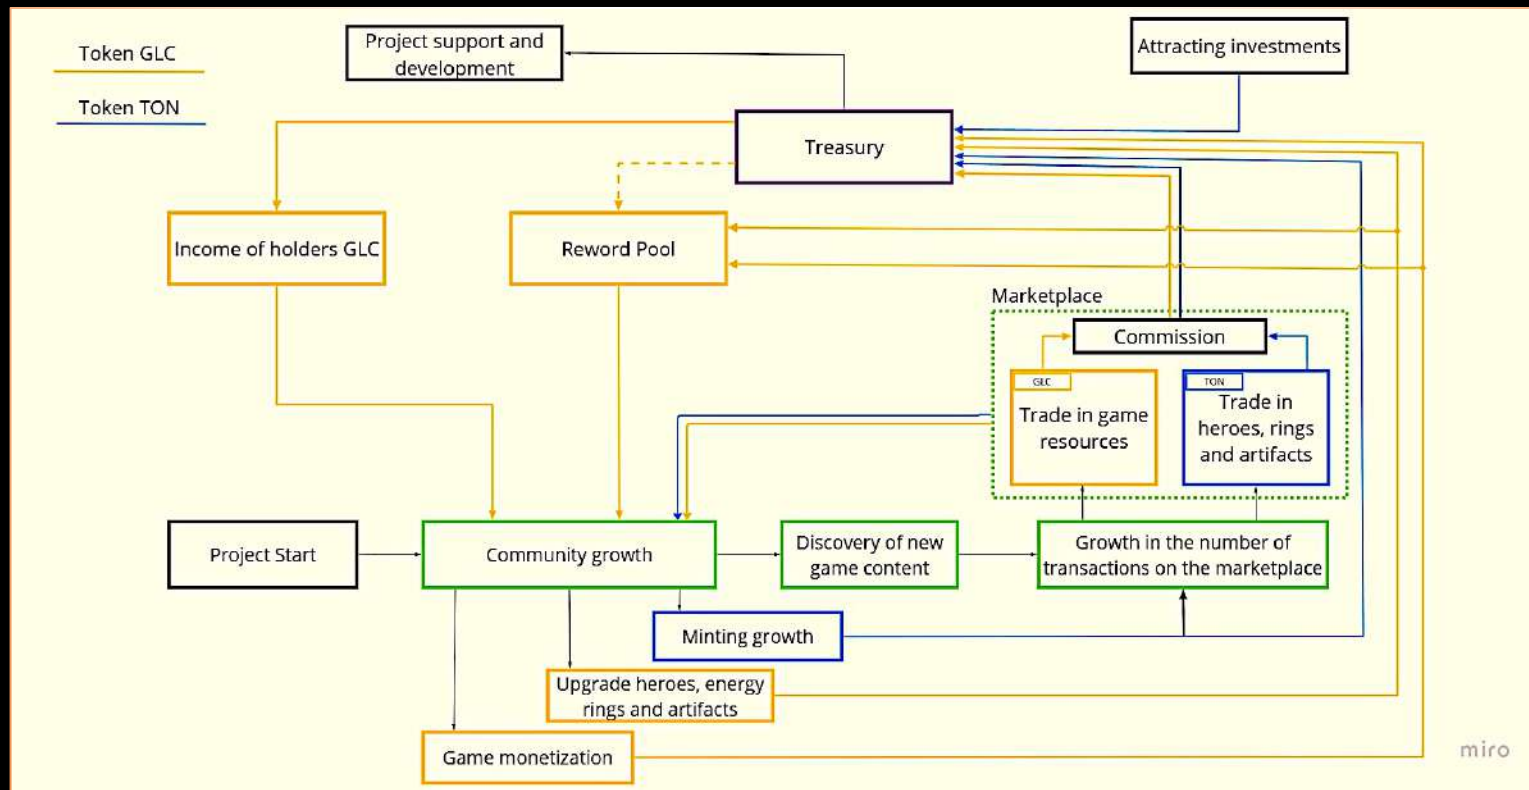

Mine rare NFTs and build your business in the game.

## Flexibility

Game events are closely related to the dynamics of the token exchange rate on the exchange.

## Minting without inflation

A unique mechanic that limits the decline in NFT value.
